
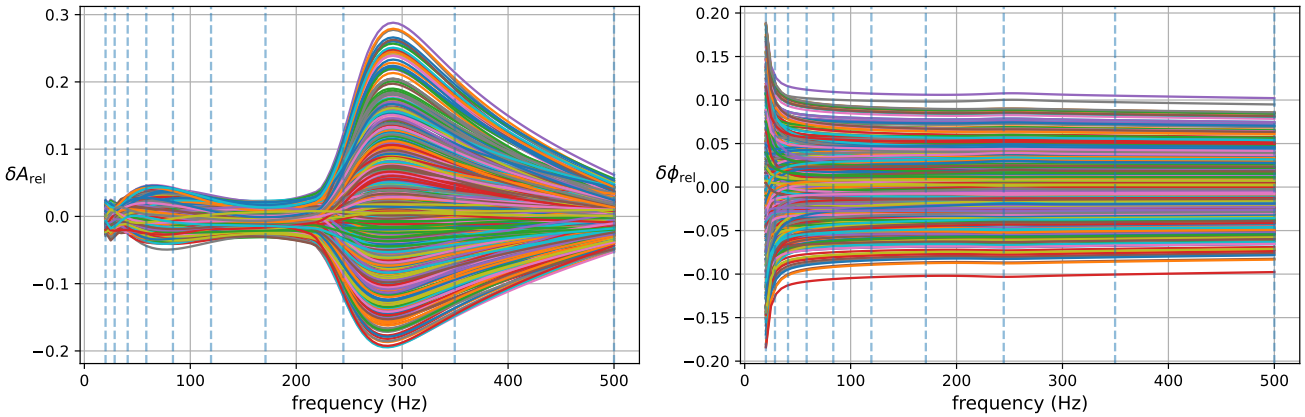

FIG. 13. For the simulations done in section V C, we show the relative errors in amplitude and phase (between precessing and non-spinning waveform template) as function of frequency. For reference, we also show 10 waveform nodal points as dashed vertical lines.

in the range $f \in [20, 500]$. Distribution of $\delta\tilde{A}(f_i), \delta\tilde{\phi}(f_i)$ at given frequency nodal point f_i can be used as prior distribution.
